

## LIGHT WEIGHT LINEN IN FLAX

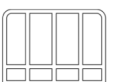

Code: 11133

Application: Curtains, Soft Furnishings

Composition: 100% Linen

Woven from the finest linen, Flax is constructed as an irregular sateen. This structure introduces a subtle variation across the surface, creating a delicate herringbone effect that becomes gently apparent on the face, while the reverse retains the smooth character of a classic sateen.

At 320 cm wide, Flax is ideal for refined and versatile drapery. Once off the loom, the fabric is washed and then softened, developing a gentle sheen and a supple hand. Weighing just under 300 g per square metre, it offers body without heaviness, allowing curtains to fall in long, fluid folds that capture light in soft tonal shifts. This effect is

# R

enriched in Flax through the use of undyed linen yarns, whose natural tonal differences vary slightly between crops, depending on weather and soil conditions. A CFA is recommended.
